

Patient Health Record Data Fields

This document outlines the required, critical, important, and helpful data fields for a comprehensive patient health record and their relevance to various analytical tools.

Data Field	Importance	Analyzer Relevance	Description
Patient Demographics	Required	N/A	Essential identifying information for the patient, including name, date of birth, and contact details.
Chief Complaint / Symptoms	Critical	Symptom Analyzer	The primary reason the patient is seeking care and the main symptoms being experienced.
Medical History	Important	Risk Analyzer	A record of past illnesses, surgeries, family history, and immunizations.
Current Medications	Helpful context	N/A	A list of all medications the patient is currently taking, including dosage and frequency.
Lab Results	Critical	Lab Analyzer	Results from blood tests, cultures, and other laboratory investigations.
Vital Signs	N/A	N/A	Measurements of the body's basic functions, such as temperature, blood pressure, and heart rate.
Clinical Notes	N/A	Notes Analyzer	Detailed observations and assessments recorded by healthcare providers during appointments.
Medical Images	Critical	Scan Analyzer	Diagnostic imaging such as X-rays, MRIs, and CT scans.
Fictional Patient Health Record Data (Brain Tumor Scenario)			

To incorporate the data fields outlined in your document and create a fictional patient record for a brain tumor case, here is the generated content:**Fictional Patient: Jane Doe**

Data Field	Value	Notes
Patient Demographics	Jane Doe, DOB: 08/21/1965, Age 58	Contact: 555-0123. Occupation: High School Teacher.
Chief Complaint / Symptoms	Headaches, Nausea, Balance Issues	Reports progressive, intense headaches (worse in morning) and difficulty maintaining balance/coordination over the last month.
Medical History	Hypertension (Controlled)	No prior surgeries. Mother had breast cancer.
Current Medications	Lisinopril 10mg daily	No known drug allergies.
Vital Signs	Temp: 98.4°F, BP: 135/85 mmHg, HR: 68 bpm, RR: 16/min	Slightly elevated blood pressure, otherwise stable.
Lab Results	Routine blood panel unremarkable	Electrolytes, CBC within normal limits.
Clinical Notes	Neurological Exam: Alert and oriented. Mild difficulty with tandem gait. Left-sided facial droop and weakness noted. Assessment: New onset of focal neurological deficits and signs of increased intracranial pressure. Plan: Immediate MRI of the brain.	Requires urgent diagnostic imaging.

Medical Images: Fictional Scan Report (Radiologist Review)

Data Field	Value	Notes
Type of Scan	MRI of the Brain (with Gadolinium Contrast)	Performed on 2025-01-10 .

Findings	A large, irregularly-shaped, heterogeneously enhancing mass is identified in the right temporoparietal lobe, measuring approximately 5.5 x 4.8 x 5.0 cm. The lesion is surrounded by extensive T2/FLAIR hyperintensity consistent with vasogenic edema. There is significant mass effect resulting in effacement of the cortical sulci and a 6mm midline shift to the left.	Features are highly suggestive of a high-grade neoplasm.
Impression	Large, space-occupying lesion in the right temporoparietal lobe, most consistent with a primary brain malignancy (e.g., Glioblastoma Multiforme). Recommend immediate neurosurgical and oncology consultation.	This is the final diagnostic summary.

Patient Health Record Data Fields

This document outlines the required, critical, important, and helpful data fields for a comprehensive patient health record and their relevance to various analytical tools.

Data Field	Importance	Analyzer Relevance	Description
Patient Demographics	Required ▾	N/A ▾	Essential identifying information for the patient, including name, date of birth, and contact details.
Chief Complaint / Symptoms	Critical ▾	Symptom Anal... ▾	The primary reason the patient is seeking care and the main symptoms being experienced.
Medical History	Important ▾	Risk Analyzer ▾	A record of past illnesses, surgeries, family history, and

			immunizations.
Current Medications	Helpful context ▾	N/A ▾	A list of all medications the patient is currently taking, including dosage and frequency.
